Number 15 (Dec 15) pp 1037–1068

Article index—Volume 41

Number 1

A unified characterisation for shared multimedia CSCW workspace designs
N. N. Kamel 1

Testing syntax and semantic coverage of Java language compilers
A. S. Boujarwah, K. Saleh and J. Al-Dallal 15

Improving risk management: moving from risk elimination to risk avoidance
T. R. Adler, J. G. Leonard and R. K. Nordgren 29

Life-cycle of a dual object-oriented specification model for real-time systems
M. A. Bruno and P. Nesi 35

Number 2

Bridging objects and relations: a mediator for an OO front-end to RDBMSs
L. Stoimenov, A. Mitrovic, S. Djordjevic-Kajan and D. Mitrovic 57

Formalising tutoring strategy selection in multimedia tutoring systems
A. K. Y. Tong and M. C. Angelides 67

Multiple multicast groups for multimedia on the Internet
G. Parr and K. Curran 91

System analysts' orientations and perceptions of system failure
J. J. Jiang, G. Klein, J. L. Balloun and S. M. Crampton 101

Heuristic principles for the design of artificial neural networks
S. Walczak and N. Cerpa 107

Number 3

Distributed implementation of the disabling operator in LOTOS
K. Naik, Z. Cheng and D. S. L. Wei 123

Stability constraints and stability normal forms for temporal relational databases
S. Y. Liao, H. Q. Wang and W. Y. Liu 131

Comparing OPEN and UML: the two third-generation OO development approaches
B. Henderson-Sellers and D. G. Firesmith 139

When are methods complementary?
R. F. Paige 157

Query execution scheduling in parallel object-oriented databases
D. Taniar and C. H. C. Leung 163

Number 4

Export database derivation in object-oriented wrappers
E.-P. Lim and H.-K. Lee 183

The use of fuzzy cognitive maps to simulate the information systems strategic planning process
D. Kardaras and B. Karakostas 197

ViewFinder: an object browser
A. D'Atri, A. Motro and L. Tarantino 211

Object model in Java: elements and application
K. Saleh 235

Number 5

Multi-stage negotiation support: a conceptual framework
J. L. H. Lim 249

Superimposition: a component adaptation technique
J. Bosch 257

Transforming RDB schema into well-structured OODB schema
X. Zhang, Y. Zhang, J. Fong and X. Jia 275

Processing temporal queries in the context of object-oriented databases
L. Wang, M. Wing, C. Davis and N. Revell 283

Empirical evaluation of reuse sensitiveness of complexity metrics
T. Kamiya, S. Kusumoto, K. Inoue and Y. Mohri 297

Number 6

Groupware and social networks: will life ever be the same again?
M. Pendergast and S. Hayne 311

Of maps and scripts: the status of formal constructs in cooperative work
K. Schmidt 319

Requirements for a virtual collocation environment
S. E. Poltrock and G. Engelbeck 331

TelCoW: telework under the co-ordination of a workflow management system
W. Dangelmaier, S. Kress and R. Wenski 341

Flexible support for business processes: extending cooperative hypermedia with process support
J. M. Haake and W. Wang 355

Toward locales: Supporting collaboration with Orbit
T. Mansfield, S. Kaplan, G. Fitzpatrick, T. Phelps, M. Fitzpatrick and R. Taylor 367

A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars
S. Honda, H. Tomioka, T. Kimura, T. Oosawa, K. Okada, and Y. Matsushita 383

Number 7

Disincentives for communicating risk: a risk paradox
C. Schmidt, P. Dart, L. Johnston, L. Sterling and P. Thorne 403

An improved method for the indexing of software
P. Di Felice and G. Fonzi 413

Measurement and prediction of the verification cost of the design in a formalized methodology
L. Fernández and J. J. Dolado 421

Integrating structured OO approaches with formal techniques for the development of real-time systems
Z. Chen, A. Cau, H. Zedan and H. Yang 435

Introducing software architecture specification and analysis in SAM through an example
J. Wang, X. He and Y. Deng 451

Number 8

Managing information system development in bureaucracies
P. Middleton 473

Extending a deductive object-oriented database system with spatial data handling facilities
A. A. A. Fernandes, A. Dinn, N. W. Paton, M. H. Williams and O. Liew 483

Submodule construction from concurrent system specifications
E. Haghverdi and H. Ural 499

Process evolution support in concurrent software process language environment
S.-C. Chou and J.-Y. J. Chen 507

An extended educational system for programming and its evaluation
N. Hattori and N. Ishii 525

Number 9

Editorial
H. Roberts and D. Bell 541

Data-mining massive time series astronomical data: challenges, problems and solutions
M. K. Ng and Z. Huang 545

Interactive exploration of interesting findings in the telecommunication network alarm sequence analyzer TASA
M. Klemettinen, H. Mannila and H. Toivonen 557

Efficient knowledge discovery through the integration of heterogeneous data
B. Scotney and S. McClean 569

Evaluating data mining procedures: techniques for generating artificial data sets
P. D. Scott and E. Wilkins 579

The management and mining of multiple predictive models using the predictive modeling markup language
R. Grossman, S. Bailey, A. Ramu, B. Malhi, P. Hallstrom, I. Pulleyn and X. Qin 589

Modification of belief in evidential causal networks
F. J. McErlean, D. A. Bell and J. W. Guan 597

Interfacing knowledge discovery algorithms to large database management systems
S. Lavington, N. Dewhurst, E. Wilkins and A. Freitas 605

Number 10

Using KBS verification techniques to demonstrate the existence of rule anomalies in ADBs
A. V. Pai, R. F. Gamble and R. T. Plant 627

Formalization and verification of event-driven process chains
W. M. P. van der Aalst 639

Control-flow semantics of use cases in UML
K. G. van den Berg and A. J. H. Simons 651

Look before you leap: on some fundamental issues in software engineering research
F. Xia 661

FHIN: an efficient storage structure and access method for object-oriented databases
N. Gorla and C.-T. Liu 673

Numbers 11–12

Guest editorial:
Communications software engineering (CSE)
K. Saleh and R. Probert 695

A service creation environment based on scenarios
R. Dssouli, S. Somé and A. Salah 697

A model-based authorware for the construction of distributed multimedia systems
S. C. Cheung and S. T. Chanson 715

Communications software design for testability: specification transformations and testability measures
R. Dssouli, K. Karoui, K. Saleh and O. Cherkaoui 729

A protocol synthesis method for fault-tolerant multipath routing
K. Ishida, Y. Kakuda, M. Nakamura, T. Kikuno and K. Amano 745

A medium access control protocol for voice and data integration in receiver-oriented DS-CDMA PCNs
Y. Yang, J. He and M. T. Liu 755

Controllability and observability in distributed testing
L. Cacciari and O. Rafiq 767

A framework for the specification of test cases for real-time distributed systems
T. Walter and J. Grabowski 781

Efficient checking sequences for testing finite state machines
K. Inan and H. Ural 799

Passive testing and application to the GSM-MAP protocol
M. Tabourier and A. Cavalli 813

Extending EASE with new ASN.1 encoding rules
R. Lai and F. Cheong 823
Recovery of CFSM-based protocol and service design from protocol execution traces
K. Saleh, R. Probert and K. Al-Saqabi 839

Number 13

FaxWeb: accessing the WWW using the fax machine
C.-M. Huang, M.-Y. Jang and T.-H. Hsu 859
Semantics of recursive relationships in entity-relationship model
H.-K. Lee 877
Cohesion prediction using information flow: an empirical feasibility study and comparison using students as inexperienced designers
J. Moses, M. Farrow and P. Smith 887
A workflow management system based on intelligent collaborative objects
G. Fakas and B. Karakostas 907
Calculating upward and downward simulations of state-based specifications
J. Derrick and E. Boiten 917

Number 14

Editorial
M. Dyer and M. Shepperd 931
Software engineering education in the 21st century

Keyword Index

Access methods
FHIN: an efficient storage structure and access method for object-oriented databases 673
Access plans
Query execution scheduling in parallel object-oriented databases 163
Active databases
Using KBS verification techniques to demonstrate the existence of rule anomalies in ADBs 627
Active testing
Passive testing and application to the GSM-MAP protocol 813
Activity space
Flexible support for business processes: extending cooperative hypermedia with process support 355
Adequacy criteria
Software testing—searching for the missing link 991
Analysis
Analysis of software bug causes and its prevention 1059
ANN learning method
Heuristic principles for the design of artificial neural networks 107
Architecture-based component reuse
Architecture-driven component reuse 963
Artificial data sets
Evaluating data mining procedures: techniques for generating artificial data sets 579
Artificial neural networks
Heuristic principles for the design of artificial neural networks 107
ASN.1
Extending EASE with new ASN.1 encoding rules 823
Association rules
Interactive exploration of interesting findings in the telecommunication network alarm sequence analyzer 557
Astronomical data
Data-mining massive time series astronomical data: challenges, problems and solutions 545
Avatar
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383
Awareness space
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383

Belief updating
Modification of belief in evidential causal networks 597
Black-box
Superimposition: a component adaptation technique 257
Browsing
FaxWeb: accessing the WWW using the fax machine 859
Business impact
How long into the 21st century will the aftermath of the millennium bug last? 951

Calculating refinements
Calculating upward and downward simulations of state-based specifications 917
Canonical encoding rules
Extending EASE with new ASN.1 encoding rules 823
Capability maturity model
In the 25 years since The Mythical Man-Month what have we learned about project management? 1021
CASE
ASSIST—a tool to support software inspection 1045
Causality
Modification of belief in evidential causal networks 597
Cause
Analysis of software bug causes and its prevention 1059
Centralized testing
Controllability and observability in distributed testing 767
Changeability
Context management in modeling information systems (IS) 957
Checking sequence
Efficient checking sequences for testing finite state machines 799
Classical regression
Cohesion prediction using information flow: an empirical feasibility study and comparison using students as inexperienced designers 887
Cleanroom development
Improving risk management: moving from risk elimination to risk avoidance 29
Client–server
Interfacing knowledge discovery algorithms to large database management systems 605
Code division multiple access
A medium access control protocol for voice and data integration in receiver-oriented DS-CDMA PCNs 755
Cohesion
Cohesion prediction using information flow: an empirical feasibility study and comparison using students as inexperienced designers 887
Collaborative work
Requirements for a virtual collocation environment 331
Collaborative workflow management
A workflow management system based on intelligent collaborative objects 907
Command and control systems
Introducing software architecture specification and analysis in SAM through an example 451
Commercial off-the-shelf products
Requirements engineering for COTS based systems 985
Communicating finite state machines
Recovery of CFSM-based protocol and service design from protocol execution traces 839
Communications software
Communications software design for testability: specification transformations and testability measures 729
Compiler
Testing syntax and semantic coverage of Java language compilers 15
Complementarity
When are methods complementary? 157
Complexity metrics
Empirical evaluation of reuse sensitiveness of complexity metrics 297
Complexity
Context management in modeling information systems (IS) 957
Components
Architecture-driven component reuse 963

PII: S0950-5849(99)00096-8

Composition
Objects and roles: modeling based on the dualistic view 1005
Computer-supported cooperative work
Requirements for a virtual collocation environment 331
Toward locales: supporting collaboration with Orbit 367
Computer telephone integration (CTI)
FaxWeb: accessing the WWW using the fax machine 859
Concentration
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383
Concurrency
Recovery of CFSM-based protocol and service design from protocol execution traces 839
Concurrent systems
Submodule construction from concurrent system specifications 499
Conformance testing
A framework for the specification of test cases for real-time distributed systems 781
Controllability and observability in distributed testing 767
Passive testing and application to the GSM-MAP protocol 813
Conformity
Context management in modeling information systems (IS) 957
Context management
Context management in modeling information systems (IS) 957
Control-flow semantics
Control-flow semantics of use cases in UML 651
Controllability
Controllability and observability in distributed testing 767
Co-ordinator
TelCoW: telework under the co-ordination of a workflow management system 341
Coordination
Of maps and scripts: the status of formal constructs in cooperative work 319
Coordinative artifacts
Of maps and scripts: the status of formal constructs in cooperative work 319
Cooperative work
Flexible support for business processes: extending cooperative hypermedia with process support 355
Of maps and scripts: the status of formal constructs in cooperative work 319
CORBA
A model-based authorware for the construction of distributed multimedia systems 715
Multiple multicast groups for multimedia on the Internet 91
Cost estimates
Software economics: status and prospects 937
Course selection and registration
An integrated web computing application for tasks related to course selection and registration 995
CSCW
A model-based authorware for the construction of distributed multimedia systems 715
Toward locales: supporting collaboration with Orbit 367
CSCW specifications
A unified characterisation for shared multimedia CSCW workspace designs 1

Database
FHIN: an efficient storage structure and access method for object-oriented databases 673
Thirty years (and more) of databases 969
Database management systems
FHIN: an efficient storage structure and access method for object-oriented databases 673
Database performance
FHIN: an efficient storage structure and access method for object-oriented databases 673
Database programming languages
Extending a deductive object-oriented database system with spatial data handling facilities 483
Data engineering
Thirty years (and more) of databases 969
Data integration
Efficient knowledge discovery through the integration of heterogeneous data 569
Data interchange formats
The management and mining of multiple predictive models using the predictive modeling markup language 589
Data management systems
Thirty years (and more) of databases 969
Data mining
Data-mining massive time series astronomical data: challenges, problems and solutions 545
Evaluating data mining procedures: techniques for generating artificial data sets 579
Interfacing knowledge discovery algorithms to large database management systems 605
The management and mining of multiple predictive models using the predictive modeling markup language 589
Data preprocessing techniques
Data-mining massive time series astronomical data: challenges, problems and solutions 545
Data structure
FHIN: an efficient storage structure and access method for object-oriented databases 673
Decision making
Software economics: status and prospects 937
Decision trees
Interfacing knowledge discovery algorithms to large database management systems 605
Deductive object-oriented databases
Extending a deductive object-oriented database system with spatial data handling facilities 483
Definition
Look before you leap: on some fundamental issues in software engineering research 661
Dependability
Software intensive embedded systems 979
Design
Heuristic principles for the design of artificial neural networks 107
Design for testability
Communications software design for testability: specification transformations and testability measures 729
Design measurement
Measurement and prediction of the verification cost of the design in a formalized methodology 421

Design recovery
Recovery of CFSM-based protocol and service design from protocol execution traces 839
Design space
A unified characterisation for shared multimedia CSCW workspace designs 1
Development life-cycle
Life-cycle of a dual object-oriented specification model for real-time systems 35
Disabling operator
Distributed implementation of the disabling operator in LOTOS 123
Disclosure Act
How long into the 21st century will the aftermath of the millennium bug last? 951
Discovery strategy
Requirements engineering for COTS based systems 985
Discovery system
Interactive exploration of interesting findings in the telecommunication network alarm sequence analyzer 557
Distinguished encoding rules
Extending EASE with new ASN.1 encoding rules 823
Distinguishing suite
Efficient checking sequences for testing finite state machines 799
Distributed heterogeneous databases
Efficient knowledge discovery through the integration of heterogeneous data 569
Distributed implementation
Distributed implementation of the disabling operator in LOTOS 123
Distributed learning
The management and mining of multiple predictive models using the predictive modeling markup language 589
Distributed multimedia systems
A model-based authorware for the construction of distributed multimedia systems 715
Distributed systems
Controllability and observability in distributed testing 767
Distributed testing
Controllability and observability in distributed testing 767
Dual model
Life-cycle of a dual object-oriented specification model for real-time systems 35
EASE
Extending EASE with new ASN.1 encoding rules 823
Education
An extended educational system for programming and its evaluation 525
Embedded systems
Software intensive embedded systems 979
Ensemble learning
The management and mining of multiple predictive models using the predictive modeling markup language 589
Entity-Relationship model
Semantics of recursive relationships in entity-relationship model 877
Episode rules
Interactive exploration of interesting findings in the telecommunication network alarm sequence analyzer 557
Estelle
Extending EASE with new ASN.1 encoding rules 823
Event-driven process chains
Formalization and verification of event-driven process chains 639
Evidential reasoning
Modification of belief in evidential causal networks 597
Exploratory searches
ViewFinder: an object browser 211

Fault-tolerant routing
A protocol synthesis method for fault-tolerant multipath routing 745
Fax
FaxWeb: accessing the WWW using the fax machine 859
Finite state machine
Communications software design for testability: specification transformations and testability measures 729
Flexible routing
A protocol synthesis method for fault-tolerant multipath routing 745
Flexible workflow
Flexible support for business processes: extending cooperative hypermedia with process support 355
Formal constructs
Of maps and scripts: the status of formal constructs in cooperative work 319
Formal methods
Distributed implementation of the disabling operator in LOTOS 123
Getting the best from formal methods 1027
Introducing software architecture specification and analysis in SAM through an example 451
Software technology—formal methods and scientific foundations 947
Formal notations
Getting the best from formal methods 1027
Formalized methodology
Measurement and prediction of the verification cost of the design in a formalized methodology 421
Framework
Empirical evaluation of reuse sensitiveness of complexity metrics 297
Frameworks
Architecture-driven component reuse 963
Free-text indexing scheme
An improved method for the indexing of software 413
Fuzzy cognitive maps
The use of fuzzy cognitive maps to simulate the information systems strategic planning process 197

GIS
Bridging objects and relations: a mediator for an OO front-end to RDBMSs 57
Graphical tool
ViewFinder: an object browser 211
Group work
Multi-stage negotiation support: a conceptual framework 249
Groupware
A unified characterisation for shared multimedia CSCW workspace designs 1
GSM-MAP protocol
Passive testing and application to the GSM-MAP protocol 813

Hard Real-Time Hierarchical Object-Oriented Design (HRT-HOOD)
Integrating structured OO approaches with formal techniques for the development of real-time systems 435
Heuristics
Heuristic principles for the design of artificial neural networks 107
Hidden layer size
Heuristic principles for the design of artificial neural networks 107
Hypermedia
Flexible support for business

processes: extending cooperative hypermedia with process support 355

Informal communication
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383
Information flow
Cohesion prediction using information flow: an empirical feasibility study and comparison using students as inexperienced designers 887
Information retrieval
An improved method for the indexing of software 413
Information systems management
Managing information system development in bureaucracies 473
Input vector
Heuristic principles for the design of artificial neural networks 107
Integrity constraints
Transforming RDB schema into well-structured OODB schema 275
Intelligent agents
A workflow management system based on intelligent collaborative objects 907
Internet
An extended educational system for programming and its evaluation 525
Internet telephony
FaxWeb: accessing the WWW using the fax machine 859
Interoperable databases
Export database derivation in object-oriented wrappers 183
Intranet
TelCoW: telework under the co-ordination of a workflow management system 341
Invisibility
Context management in modeling information systems (IS) 957

Java
Object model in Java: elements and application 235
Testing syntax and semantic coverage of Java language compilers 15

KDD primitives
Interfacing knowledge discovery algorithms to large database management systems 605
Knowledge-based systems
Using KBS verification techniques to demonstrate the existence of rule anomalies in ADBs 627
Knowledge discovery
Efficient knowledge discovery through the integration of heterogeneous data 569
Modification of belief in evidential causal networks 597
Knowledge discovery methodology
Interactive exploration of interesting findings in the telecommunication network alarm sequence analyzer 557
Knowledge management
Architecture-driven component reuse 963

Learning organisations
Architecture-driven component reuse 963
Legacy data
Export database derivation in object-oriented wrappers 183
Life-cycle cost
Improving risk management: moving from risk elimination to risk avoidance 29
Locales framework
Toward locales: supporting collaboration with Orbit 367
Logistic regression
Cohesion prediction using information flow: an empirical feasibility study and comparison using students as inexperienced designers 887
LOTOS
Distributed implementation of the disabling operator in LOTOS 123

Mealy automaton
Efficient checking sequences for testing finite state machines 799
Medium access control
A medium access control protocol for voice and data integration in receiver-oriented DS-CDMA PCNs 755
Metamodels
Comparing OPEN and UML: the two third-generation OO development approaches 139
Method integration
When are methods complementary? 157
Methodology
Comparing OPEN and UML: the two third-generation OO development approaches 139
Managing information system development in bureaucracies 473
Middleware
A model-based authorware for the construction of distributed multimedia systems 715
Millennium bug
How long into the 21st century will the aftermath of the millennium bug last? 951
Modelling language
Comparing OPEN and UML: the two third-generation OO development approaches 139
Multidatabases
Providing views and closure for the object data management group object model 1037
Multimedia authoring
A model-based authorware for the construction of distributed multimedia systems 715
Multimedia interfaces
A unified characterisation for shared multimedia CSCW workspace designs 1
Multimedia specification
A model-based authorware for the construction of distributed multimedia systems 715
Multimedia tutoring systems
Formalising tutoring strategy selection in multimedia tutoring systems 67
Multimedia
Multiple multicast groups for multimedia on the Internet 91
Multipath routing
A protocol synthesis method for fault-tolerant multipath routing 745
Multiple tutoring strategies
Formalising tutoring strategy selection in multimedia tutoring systems 67
Multi-port finite state machine
Controllability and observability in distributed testing 767
Multi-valued dependency
Transforming RDB schema into well-structured OODB schema 275

Negotiation
Multi-stage negotiation support: a conceptual framework 249
Negotiation support systems
Multi-stage negotiation support: a conceptual framework 249
Notation
Comparing OPEN and UML: the two third-generation OO development approaches 139

Object browsing
ViewFinder: an object browser 211
Object data management group
Providing views and closure for the object data management group object model 1037
Object model
Object model in Java: elements and application 235
Providing views and closure for the object data management group object model 1037
Object-oriented databases
Export database derivation in object-oriented wrappers 183
Processing temporal queries in the context of object-oriented databases 283
Object-oriented design
Integrating structured OO approaches with formal techniques for the development of real-time systems 435
Object-oriented development
An integrated web computing application for tasks related to course selection and registration 995
Empirical evaluation of reuse sensitiveness of complexity metrics 297
Object-oriented model
Bridging objects and relations: a mediator for an OO front-end to RDBMSs 57
Transforming RDB schema into well-structured OODB schema 275
Object-oriented programming
Object model in Java: elements and application 235
Object-oriented
FHIN: an efficient storage structure and access method for object-oriented databases 673
Life-cycle of a dual object-oriented specification model for real-time systems 35
Objects
Objects and roles: modeling based on the dualistic view 1005
Object query language
Providing views and closure for the object data management group object model 1037
Object technology
Comparing OPEN and UML: the two third-generation OO development approaches 139
Observability
Controllability and observability in distributed testing 767
OO-to-relational mapping algorithm
Bridging objects and relations: a mediator for an OO front-end to RDBMSs 57
Operational semantics
Distributed implementation of the disabling operator in LOTOS 123
Opportunistic interactions
Requirements for a virtual collocation environment 331
Orientation
System analysts' orientations and perceptions of system failure 101

Parallelism
Interfacing knowledge discovery algorithms to large database management systems 605
Parallel object-oriented databases
Query execution scheduling in parallel object-oriented databases 163
Parallel query execution
Query execution scheduling in parallel object-oriented databases 163
Partition testing
Software testing—searching for the missing link 991
Partitioned learning
The management and mining of multiple predictive models using the predictive modeling markup language 589
Passive testing
Passive testing and application to the GSM-MAP protocol 813
Patterns
Architecture-driven component reuse 963
Personal communication networks
A medium access control protocol for voice and data integration in receiver-oriented DS-CDMA PCNs 755
Personal space
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383
Petri nets
Formalization and verification of event-driven process chains 639
Prediction systems
Measurement and prediction of the verification cost of the design in a formalized methodology 421
Predictive modeling
The management and mining of multiple predictive models using the predictive modeling markup language 589
Presence
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383
Prevention measure
Analysis of software bug causes and its prevention 1059
Procedures
Of maps and scripts: the status of formal constructs in cooperative work 319
Process evolution
Process evolution support in concurrent software process language environment 507
Process-centered software engineering environment
Process evolution support in concurrent software process language environment 507
Programming
An extended educational system for programming and its evaluation 525
Project management
In the 25 years since The Mythical Man-Month what have we learned about project management? 1021
Managing information system development in bureaucracies 473
Protocol engineering
A protocol synthesis method for fault-tolerant multipath routing 745
Protocols
Recovery of CFSM-based protocol and service design from protocol execution traces 839
Protocol synthesis
A protocol synthesis method for fault-tolerant multipath routing 745
Pseudo-random generators
Evaluating data mining procedures: techniques for generating artificial data sets 579
Public sector
Managing information system development in bureaucracies 473

Query processing
Processing temporal queries in the context of object-oriented databases 283

Reactive real-time systems
Software intensive embedded systems 979
Readiness
How long into the 21st century will the aftermath of the millennium bug last? 951
Realms
Extending a deductive object-oriented database system with spatial data handling facilities 483
Real-time
A framework for the specification of test cases for real-time distributed systems 781
Real-time computational tree logic
Introducing software architecture specification and analysis in SAM through an example 451
Real-time concurrent systems
Introducing software architecture specification and analysis in SAM through an example 451
Real-time distributed systems testing
A framework for the specification of test cases for real-time distributed systems 781
Real-time distributed systems
A framework for the specification of test cases for real-time distributed systems 781
Real-time systems
Life-cycle of a dual object-oriented specification model for real-time systems 35
Recursive dependency
Semantics of recursive relationships in entity-relationship model 877
Recursive relationship
Semantics of recursive relationships in entity-relationship model 877
Refinement calculus
Integrating structured OO approaches with formal techniques for the development of real-time systems 435
Refinement
Calculating upward and downward simulations of state-based specifications 917
Relational model
Bridging objects and relations: a mediator for an OO front-end to RDBMSs 57
Stability constraints and stability normal forms for temporal relational databases 131
Transforming RDB schema into well-structured OODB schema 275
Remote testing
Controllability and observability in distributed testing 767
Representation
Look before you leap: on some fundamental issues in software engineering research 661
Requirements driven process
Requirements engineering for COTS based systems 985
Requirement engineering
A service creation environment based on scenarios 697
Requirements elicitation
Control-flow semantics of use cases in UML 651
Requirements
Requirements for a virtual collocation environment 331
Research methodology
Look before you leap: on some fundamental issues in software engineering research 661
Reuse
Architecture-driven component reuse 963
Empirical evaluation of reuse sensitiveness of complexity metrics 297
Reverse engineering
Recovery of CFSM-based protocol and service design from protocol execution traces 839
Risk avoidance
Improving risk management: moving from risk elimination to risk avoidance 29
Risk management
Disincentives for communicating risk: a risk paradox 403
ROCK & ROLL
Extending a deductive object-oriented database system with spatial data handling facilities 483
Roles
Objects and roles: modeling based on the dualistic view 1005
ROSE algebras
Extending a deductive object-oriented database system with spatial data handling facilities 483
Rule verification
Using KBS verification techniques to demonstrate the existence of rule anomalies in ADBs 627
RWANDA
Multiple multicast groups for multimedia on the Internet 91

Scenario
A service creation environment based on scenarios 697
Scheduling
Query execution scheduling in parallel object-oriented databases 163
Schema transformation
Transforming RDB schema into well-structured OODB schema 275
Semantics
Integrating structured OO approaches with formal techniques for the development of real-time systems 435
Service creation environment
A service creation environment based on scenarios 697
Services
Recovery of CFSM-based protocol and service design from protocol execution traces 839
SGML
The management and mining of multiple predictive models using the predictive modeling markup language 589
Simulation
The use of fuzzy cognitive maps to simulate the information systems strategic planning process 197
Slotted ALOHA
A medium access control protocol for voice and data integration in receiver-oriented DS-CDMA PCNs 755
Software architecture
Introducing software architecture specification and analysis in SAM through an example 451
Software bug
Analysis of software bug causes and its prevention 1059
Software development methods
When are methods complementary? 157
Software development process
Getting the best from formal methods 1027
Software development project
In the 25 years since The Mythical Man-Month what have we learned about project management? 1021

Software economics
Software economics: status and prospects 937
Software engineering
Software technology—formal methods and scientific foundations 947
Software inspection
ASSIST—a tool to support software inspection 1045
Software library
An improved method for the indexing of software 413
Software metrics
Measurement and prediction of the verification cost of the design in a formalized methodology 421
Software process
Process evolution support in concurrent software process language environment 507
When are methods complementary? 157
Software procurement
Disincentives for communicating risk: a risk paradox 403
Software project management
Disincentives for communicating risk: a risk paradox 403
Software testing
A framework for the specification of test cases for real-time distributed systems 781
Software testing—searching for the missing link 991
Testing syntax and semantic coverage of Java language compilers 15
Spatial data management
Extending a deductive object-oriented database system with spatial data handling facilities 483
Spatial data types
Extending a deductive object-oriented database system with spatial data handling facilities 483
Specification language
When are methods complementary? 157
Specification transformation
Communications software design for testability: specification transformations and testability measures 729
SSADM
Managing information system development in bureaucracies 473
Stability constraints
Stability constraints and stability normal forms for temporal relational databases 131
Stability normal form
Stability constraints and stability normal forms for temporal relational databases 131
Standardization
An extended educational system for programming and its evaluation 525
State-based systems
Calculating upward and downward simulations of state-based specifications 917
State identification and verification
Efficient checking sequences for testing finite state machines 799
Stepwise refinement
Submodule construction from concurrent system specifications 499
Strategic information systems planning
The use of fuzzy cognitive maps to simulate the information systems strategic planning process 197
Submodule construction problem
Submodule construction from concurrent system specifications 499
Superimposition
Superimposition: a component adaptation technique 257
System analysts
System analysts' orientations and perceptions of system failure 101
System models
Software technology—formal methods and scientific foundations 947
Systems test
How long into the 21st century will the aftermath of the millennium bug last? 951

Team work
Requirements for a virtual collocation environment 331
Telecom software
Object model in Java: elements and application 235
Telecommunications
Interactive exploration of interesting findings in the telecommunication network alarm sequence analyzer 557
Telework
TelCoW: telework under the co-ordination of a workflow management system 341
Temporal agent model
Integrating structured OO approaches with formal techniques for the development of real-time systems 435
Temporal data
Processing temporal queries in the context of object-oriented databases 283
Temporal database
Stability constraints and stability normal forms for temporal relational databases 131
Testability measure
Communications software design for testability: specification transformations and testability measures 729
Test case generation
Testing syntax and semantic coverage of Java language compilers 15
Testing
Communications software design for testability: specification transformations and testability measures 729
Testing architectures
A framework for the specification of test cases for real-time distributed systems 781
Test notations
A framework for the specification of test cases for real-time distributed systems 781
Time Petri nets
Introducing software architecture specification and analysis in SAM through an example 451
Time series
Data-mining massive time series astronomical data: challenges, problems and solutions 545
Timing behaviour
Recovery of CFSM-based protocol and service design from protocol execution traces 839
Trusted system
Context management in modeling information systems (IS) 957
Tutoring strategy selection
Formalising tutoring strategy selection in multimedia tutoring systems 67

UML
Control-flow semantics of use cases in UML 651
Universal classification scheme
Efficient knowledge discovery through the integration of heterogeneous data 569

Use case modelling
Control-flow semantics of use cases in UML 651

Validation
Look before you leap: on some fundamental issues in software engineering research 661
Software intensive embedded systems 979
Verification
Formalization and verification of event-driven process chains 639
Verification and validation
Life-cycle of a dual object-oriented specification model for real-time systems 35
Views
Providing views and closure for the object data management group object model 1037
Virtual collocation
Requirements for a virtual collocation environment 331
Virtual office
A company-office system "Valentine" providing informal communication and personal space based on 3D virtual space and avatars 383
Voice and data integration
A medium access control protocol for voice and data integration in receiver-oriented DS-CDMA PCNs 755

Web computing
An integrated web computing application for tasks related to course selection and registration 995
White-box
Superimposition: a component adaptation technique 257
Workflow
A workflow management system based on intelligent collaborative objects 907
Workflow intelligent business objects
A workflow management system based on intelligent collaborative objects 907
Workflow management
Formalization and verification of event-driven process chains 639
TelCoW: telework under the co-ordination of a workflow management system 341

XML
The management and mining of multiple predictive models using the predictive modeling markup language 589

Y2K compliance
How long into the 21st century will the aftermath of the millennium bug last? 951
Y2K deadline
How long into the 21st century will the aftermath of the millennium bug last? 951
Year 2000 (Y2K) litigation
How long into the 21st century will the aftermath of the millennium bug last? 951

Z
Calculating upward and downward simulations of state-based specifications 917
